

VERTIC

SAFETY AT HEIGHT SOLUTIONS

THE MOST APPROPRIATE SOLUTIONS FOR YOUR SAFETY

***VERTIC is a manufacturer
of engineered solutions
against falls from a
height.***

*We design either standard
or tailor-made fall protection
systems.*

*Our specialists provide you a
package of services for a turnkey
safety solution: from the definition
of your needs to the control of
your installations.*

AUDIT

IDENTIFY AND ASSESS YOUR NEEDS

To be efficient, a fall protection equipment needs to be adapted according to the environment of use and the type of the interventions to secure.

Our teams identify and assess the fall hazards to lead you towards the most appropriate safety solution.

DESIGN, ENGINEERING

AN APPROPRIATE SAFETY SOLUTION TO EACH NEED

No matter what your structure is, the shape of your building or your architectural constraints, VERTIC has safety solutions for you.

Our in-house engineers are specialists in mechanical, structural engineering, and design standard or customized user-friendly safety systems against falls from a height, perfectly appropriated to your needs.

MANUFACTURING

AN OVERALL INTEGRATED MANUFACTURING PROCESS

Our integrated production facility guarantees optimal process mastery.

Our products are designed and manufactured in France under strict quality assurance controls.

Working with VERTIC is the guarantee to benefit from a complete control of product quality and delivery times.

OUR KNOW-HOW FOR *TURNKEY* SAFETY SOLUTIONS

CUSTOMER SERVICE

A BESPOKE CUSTOMER SERVICE

Before, during and after the installation of VERTIC's safety systems, our supportive team is available to provide you training, engineering and installation supports: drawings, plans, calculation notes or quotations...

Working with VERTIC is the guarantee to build a strong relationship of trust with **a team of specialists** in safety at height.

INSTALLATION

READY-TO-USE FALL PROTECTION SYSTEMS

Our **in-house installation teams** are trained and certified for working at heights. We work to optimize our interventions and prevent from downtimes in production.

Operating on the whole territory, we have the appropriate security clearances (cradles, rope access, chemical, health and safety at work...), to suit the most your requirements and constraints.

TRAINING, CONTROL, MAINTENANCE

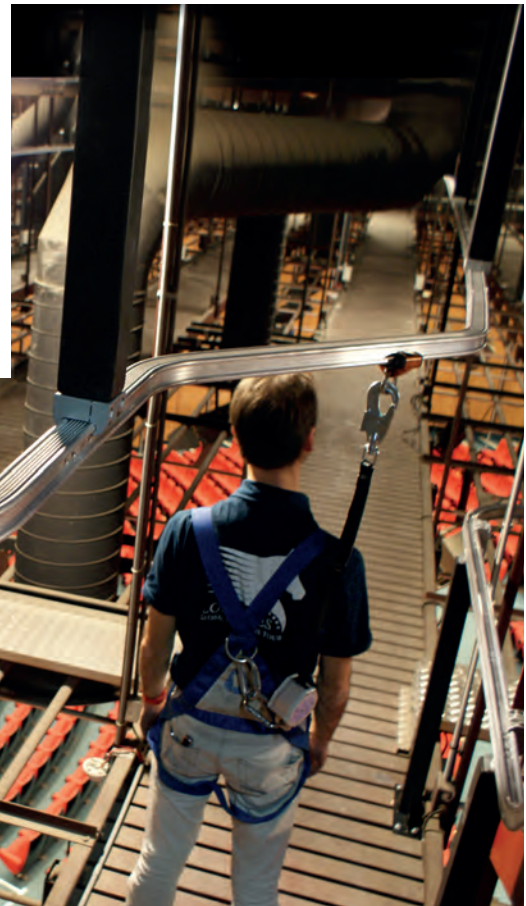

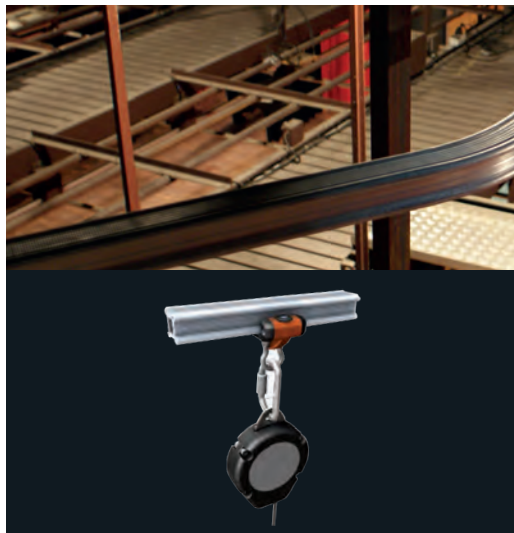

THE ADEQUATE BEHAVIOURS AND EQUIPMENTS WHILE WORKING AT HEIGHTS

Our subsidiary ALPIC provides you the support you need to control and approve the use of your equipments against falls from a height:

- **Tailor-made trainings:** theoretical and practical
- **Inspection** of your PPE and installations before use
- **Periodical controls and maintenance** of your PPE and installations
- **Audit** of your needs in safety

SAFETY FOR MANUFACTURING ZONE

ALTIRAIL

Versatility

Designed to work at distance from the system, in tension or under loads

User productivity

Free movement all along the system without unclipping

User-friendly

Various routes of circulation allowed, thanks to the bended rail and motorized turning table

Optimum safety

Efficient system even on small heights of fall: overall fall clearance reduced

Superior design

Superior design and finish allow a perfect integration whatever architectural constraints (anodization upon request)

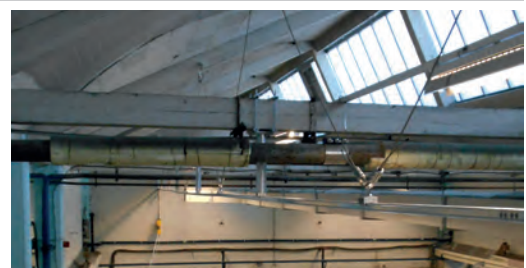

Turning table

Slinged suspended rail

For specific use,

when no supporting structure is available, the ALTIRAIL system can be suspended with a wire rope.

ANCHOR POINT

Optimum safety

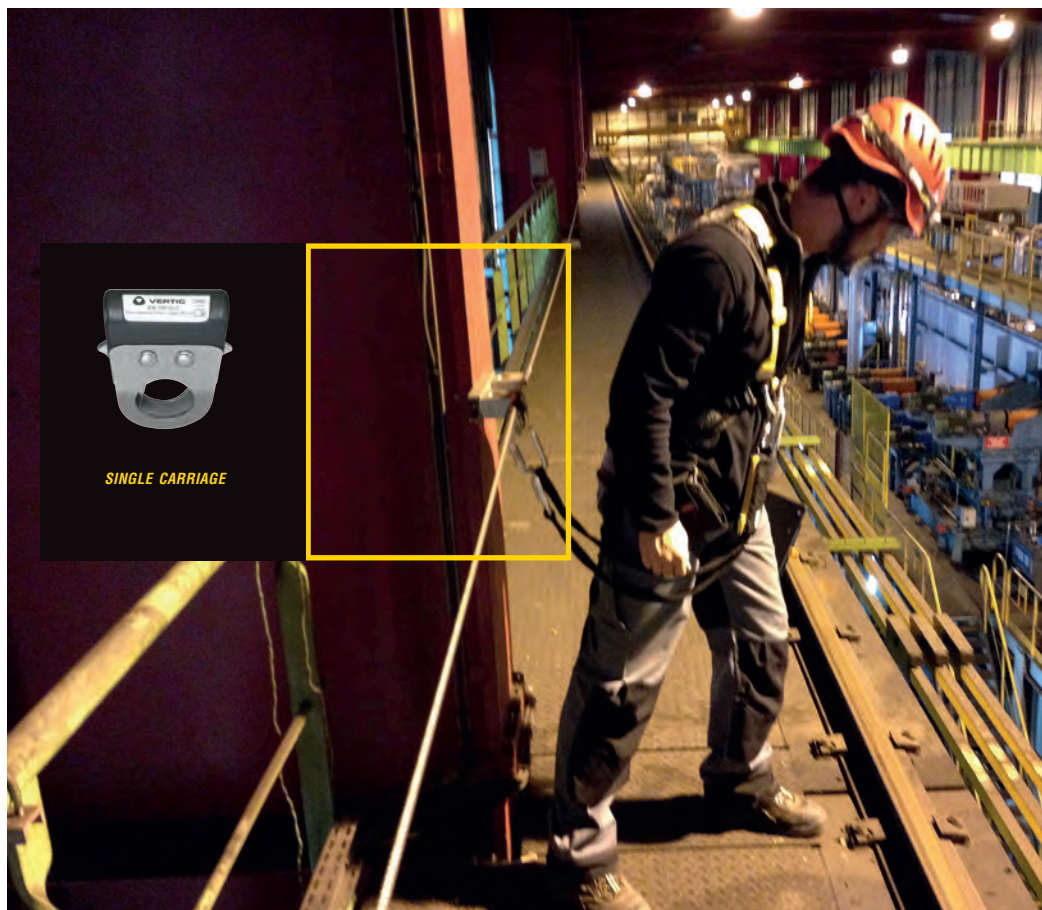

Ideal to secure a limited area

Cost-effective and user-friendly system

VERTIC

SINGLE CARRIAGE

ALTILIGNE

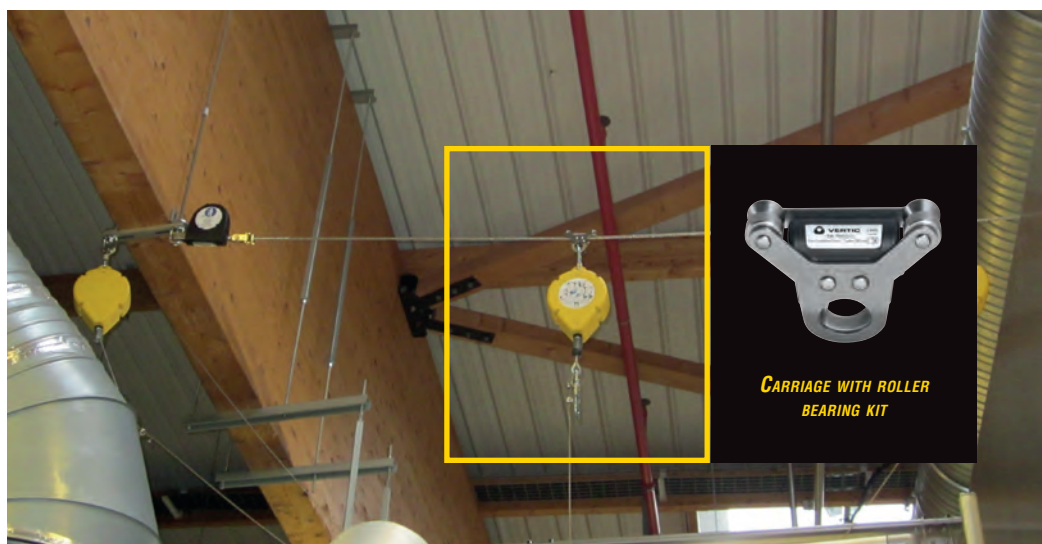

User productivity

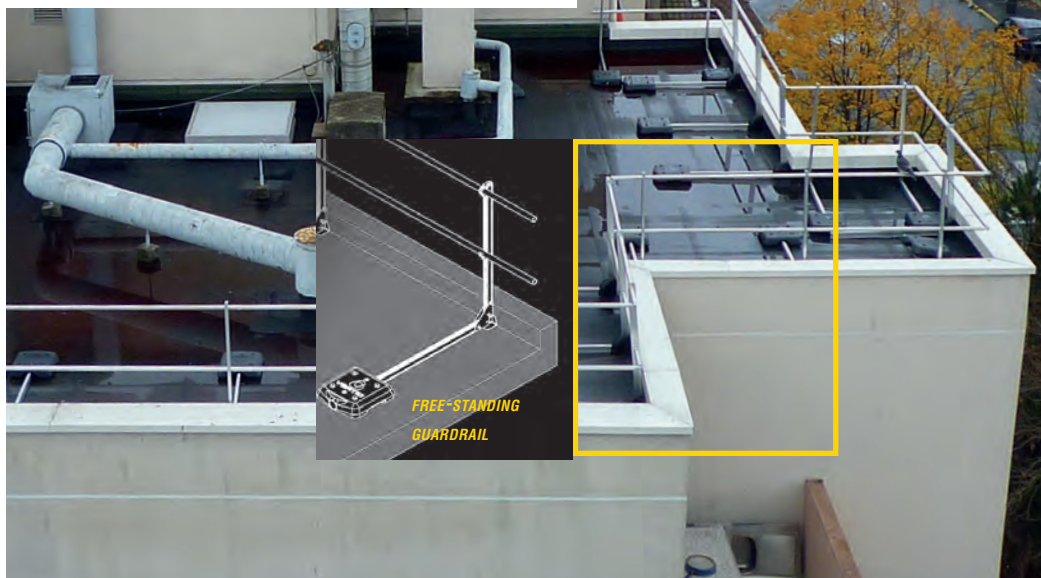

Freedom of movement without unclipping

User-friendly

Especially designed to work at distance from the lifeline system, without damaging user safety

CARRIAGE WITH ROLLER
BEARING KIT

SAFETY ON ROOF

ALUTILISSE

DIFFERENT COLORS AND
COATING AVAILABLE
UPON REQUEST

Free-standing

Protection of the waterproofing membrane

No damage on the roof membrane

Thanks to the ergonomic and rounded shape of the counterweight

Long-lasting lifespan

100% made of aluminum

Superior design

Available in straight, bent or folding versions, to be blended into the building architecture

On parapet

Versatility

Attachments on all types of parapets

On steel deck

Flexibility of fastening

Installation on the most varied types of steel deck or sandwich panels

No damage to roof integrity

No need to drill or penetrate the roof membrane: installation directly on steel deck

VERTIC

BATILIGNE

No production downtime

No under-surface intervention

User productivity

Free movement in all directions and easy access through intermediate brackets without unclipping

Versatility

Can be installed on the most varied roofing deck profiles thanks to the "ALTIFIX" range of posts and anchor points

8 / 9

B

SAFETY
ON ROOF

ALTIGRID

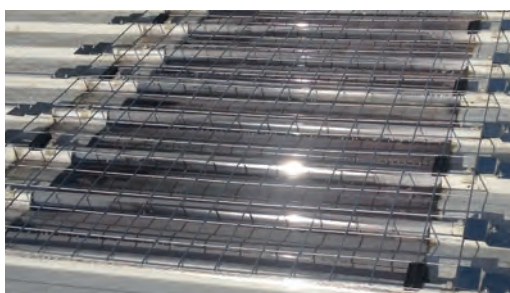

For rooflights or translucent elements

1 200 joules resistance

Suitable for all types of configurations

Made of galvanized steel wire

Rooflights

Simplicity

Universal modular railing for all types of configurations

No damage to roof integrity

Installed directly inside the hopper from the outside, after removing or opening the dome

Optimum safety

Very small impact on the area used for smoke extraction

Translucent elements

Simplicity

Highly adaptable grid for all types of configurations

Cost-effective

No need to replace the translucent elements to secure the installation

No damage to roof integrity

Sealing ensured by EPDM seals and Vulca washers

ACCESS

VERTILIGNE

User productivity

Free movement all along the system without unclipping

Simplicity

Attached directly on the ladder

Long-lasting lifespan

No noise disturbance or damage on the wire rope, which is maintained through the intermediate brackets

CAGED LADDERS

Versatility

Designed to suit all types of building configurations

Installation on the most varied façades

VERTIRAIL

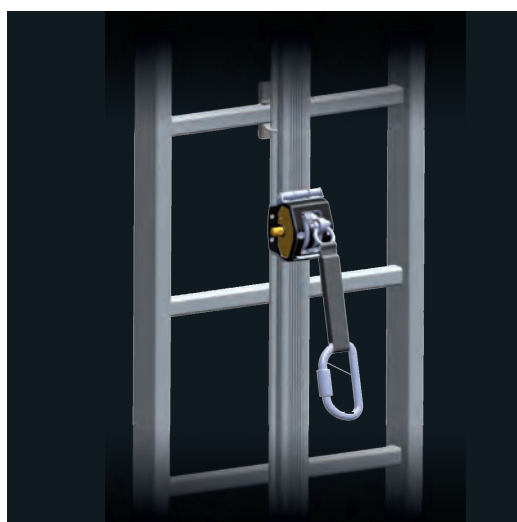

User mobility

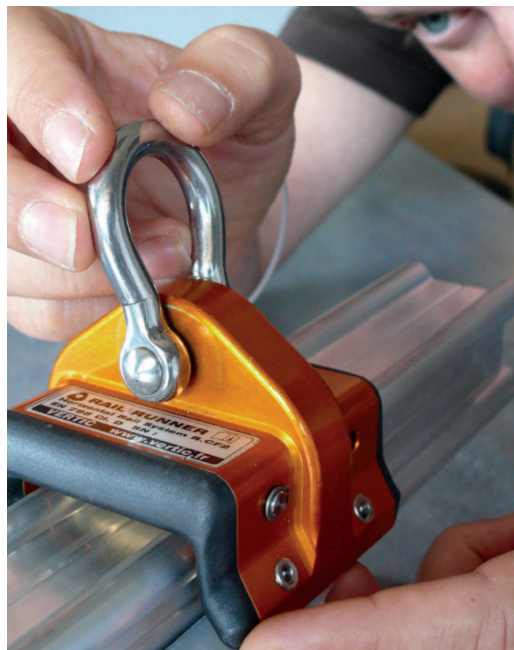

*Free movement all along the system
without unclipping, while ascending or
descending
Ideal system for significant heights to
climb*

Simplicity

Installation directly on the ladder

TAILOR-MADE SOLUTIONS

Our in-house engineers are specialists in mechanical, structural engineering, and design customized user-friendly safety systems according to your projects.

Using the best softwares, VERTIC designs tailor-made fall protection systems and provides you calculation notes, drawings... according to your architectural constraints, needs and requirements.

LONG-SPAN HORIZONTAL LIFELINE

Whether you have not enough supporting structure available

for the installation of a standard lifeline, VERTIC provides you a reinforced version of this one.

Versatility

Designed to work at distance from the system, in tension or under loads

Adjustable

Span between two intermediates can be higher than 15 metres

VERTIC

User productivity

Free movement all along the rail system without unclipping, on horizontal, vertical structures or even on slopes up to 180°

Optimum safety on all types of slopes

The bi-directional blocking carriage works only in the event of fall and when the worker needs it

Versatility

Especially designed to work in tension or under loads

Superior design

Superior design and finish allow a perfect integration whatever architectural constraints on site (anodization upon request)
